

# Reheat Foods to 165°F

- Reheat foods to 165°F within one hour. While reheating, stir the food so that all parts of it reach 165°F.
- Use stove burners, microwave ovens, convection ovens, or double boilers to reheat foods.
- Do not use equipment such as steam tables, crock pots or other hot holding devices to reheat foods because they are not able to reheat foods to 165°F within one hour.
- Use your thermometer to check the internal temperature of the food product.
